

Valve Cover Racing Corvair Style

A Corvair Valve Cover made into a gravity powered racer weighing no more than 4 1/2 pounds.

No motors, no springs, or other propelling devices.

Up to 16" long, no wider than 8" (including the tires).

Front end may not hang over the 3" high starting gate.

Cars race in pairs down a 40 foot track with a 4 foot incline.

Each track is just slightly over 8" wide with 3/4" dividers to keep the racers apart.

No lane hopping or interference--do it once: get a rerun; do it twice: you're out.

Everyone competes for the same prize, all ages against all ages: a trophy for first place, certificates for second and third.
